ANESTHETICS: TOPICAL

Topical Anesthetic Gel
from Hurricaine

Available in Wild Cherry (original), Piña Colada, Watermelon, and Fresh Mint flavors. Apply to affected area with a cotton swab. Provides lubrication and adhesion to oral mucosal tissues for accurate placement.

0283-0871-31 .......... Wild Cherry
0283-0886-31 .......... Piña Colada
0283-0998-31 .......... Fresh Mint
1 fl. oz. jars.

Snap-n-Go Swabs
from Hurricaine

Available in Wild Cherry (original) flavor. Convenient unit dose packaging. Ready-to-use applicator limits potential for cross-contamination.

0283-0569-72 .......... Wild Cherry
72 swabs/box.

Topical Anesthetic Liquid
from Hurricaine

Available in Wild Cherry (original) and Piña Colada flavors. Apply to affected area with a cotton swab or use an irrigating syringe with a blunt tip to relieve deeper areas and periodontal pockets. Use 1 tsp. or less and swish for 10 seconds, gargle and expectorate.

0569-31 ................. Wild Cherry
0283-1886-31 .......... Piña Colada
1 fl. oz. jars.

Cotton Tipped Applicators

Cotton-tipped sterile applicator with a wooden shaft. Applicator measures 6" x 1/12". Two applicators per pack.

76800 .......................... Applicators
100 packs/box. 10 boxes/case.

COLD PACKS

Jack Frost Instant Cold Packs

Contains 20% Benzocaine for maximum strength pain relief while fast working to quickly relieve patient discomfort. Available in great tasting flavors in a 1 oz. bottle.

### ANESTHETICS: SUBCUTANEOUS

**Zorcaine**  
**with Epinephrine 1:100,000 injection**  
*(Articaine Hydrochloride 4%)*  

Zorcaine is the newest anesthetic from Cook-Waite — the brand dental professionals have relied on for more than 60 years. Zorcaine is backed by Kodak, the name you trust for quality, consistency and support.

**894-2831**  
50 carpules/box.

---

**Carbocaine 2% with Neo-Cobefrin**  
*(Mepivacaine Hydrochloride and Levonordefrin Injection, USP)*  

Neo-Cobefrin is a vasoconstrictor that produces less cardiac and central nervous system stimulation than Epinephrine. Carbocaine 2% with Neo-Cobefrin provides effective, fast-onset operative anesthesia with few side effects.

**144-9313**  
50 carpules/box.

---

**Carbocaine 3% without Vasoconstrictor**  
*(Mepivacaine Hydrochloride Injection, USP)*  

Can effectively meet a wide variety of dental anesthesia needs. The onset of anesthetic action is fast—30 to 120 seconds in the upper jaw, and 1 to 4 minutes in the lower jaw. Provides fast-acting anesthesia for intermediate durations, and is sulfite-free. Indicated for production of local anesthesia for dental procedures by infiltration or nerve block in adults and children.

**143-0735**  
50 carpules/box.

---

**Lidocaine HCl 2% (red)**  
**with Epinephrine 1:100,000 injection**  
**Lidocaine HCl 2% (green)**  
**with Epinephrine 1:50,000 injection**  
*(Lidocaine Hydrochloride and Epinephrine Injection, USP)*  

Provides profound local anesthesia of intermediate duration. Average pulpal anesthesia of at least 60 minutes during maxillary infiltration and at least 90 minutes when used for an inferior alveolar block. Provides effective, rapid-onset anesthesia for intermediate duration dental procedures. Lidocaine is indicated for production of local anesthesia by nerve block or infiltration techniques.

**155-9889**  
Lidocaine (red)  
**162-8262**  
Lidocaine (green)  
50 carpules/box.

---

**Marcaine 0.5% with Epinephrine 1:200,000 injection**  
*(Bupivacaine and Epinephrine Injection, USP)*  

Provides profound operative anesthesia for up to six hours, and prolonged soft-tissue pain control for up to seven hours. Its unique, extended anesthetic action reduces the need for postoperative analgesics. Onset of the anesthesia takes only two to ten minutes. Marcaine is indicated for the production of local anesthesia for dental procedures by infiltration injection or nerve block in adults.

**185-2557**  
50 carpules/box.

---

**Septocaine®**  
**with Epinephrine 1:100,000 or 1:200,000 injection**  
*(Articaine HCl. 4% with Epinephrine Injection)*  

Septocaine is desirable with a fast onset (1 to 9 minutes) to avoid delay before effective analgesia is achieved. Duration of anesthesia is up to 60 minutes for infiltration injections and 120 minutes for nerve blocks. No-methylparaben formulation helps to avoid allergic reactions on sensitive patients with 100 percent latex-free components to reduce allergic responses.

**0362-9049-02**  
50 carpules/box. 1:100,000 injection.  
**0362-9048-02**  
50 carpules/box. 1:200,000 injection.
ANESTHETICS: CARTRIDGES

Quala Anesthetic Cartridges

Quality injectable local anesthetics manufactured to U.S.P. specifications in 1.7mL cartridges, 50 per box.
